

## KEEP YOUR TREE *Hydrated*

If you allow the water level to drop below the fresh cut, a new seal will form and the tree will no longer absorb water. A new cut will be necessary.

## REAL TEXAS CHRISTMAS *Tree Care*

**Caring for your real Christmas tree is easy.  
Just remember, trees need water—  
just like a fresh bouquet of flowers.**

.....

Cut 1 to 2 inches off the bottom of trunk  
before mounting in stand.

.....

Immediately place your tree in a  
water-holding tree stand.

.....

Trees can be very thirsty, so add fresh  
water daily as needed.

.....

If storing your tree outside before  
decorating, remember to keep it in water  
and protect it from the wind and sun.

.....

Keep your tree away from fireplaces  
and other heat sources.

.....

Turn off all of your tree decorations  
before retiring at night and any time  
you leave your home.

**The Texas Christmas Tree Growers Association  
wishes you a warm and wonderful Christmas!**

**GO TEXAN.**
